In **Number analogy** questions the first term is related to the second term in so many ways like:- difference b/w the numbers, prime no, square, cube, digit sum, divisibility and addition, subtraction, multiplication, division of the numbers.

Example: 1 Select the option that is related to the fifth number in the same

way as the second number is related to the first number and the fourth number is related to the third number.
13 : 120 :: 17 : 152 :: 21 : ?

Solution:-

In 13 : 120, $13 : (13 + 2) \times 8 = 13 : 15 \times 8 = 13 : 120$

In 17 : 152, $17 : (17 + 2) \times 8 = 17 : 19 \times 8 = 17 : 152$

In 21 : (?), $21 : (21 + 2) \times 8 = 21 : 23 \times 8 = 21 : 184$

Example:2 Select the option in which the two numbers are related in the same way as are the two numbers of the following number-pair

25 : 343

(a) 24 : 216 (b) 29 : 121

(c) 34 : 510 (d) 30 : 729

Solution:-

Logic : (Sum of digits) : (number)³

⇒ 25 : 343

⇒ $(5 + 2) = 7 : (7)^3$

Similarly

⇒ 24 : 216

⇒ $(4 + 2) = 6 : (6)^3$

In **alphabetical analogy** questions the first term is related to the second term in so many ways like:- same difference b/w alphabet, Reverse of the alphabet, and add, subtract, multiply divide the same number and on the basis of vowel & consonant.

Example: 1 Select the option that is related to the fifth letter-cluster in the same way as the second letter-cluster is related to the first letter-cluster and the fourth letter-cluster is related to the third letter-cluster.
